Moscow, Russia (Hybrid)

SUMMARY

Site Reliability / Platform Engineer with 8+ years in data infrastructure and reliability: Kafka, ClickHouse, and large-scale batch/stream processing (Hadoop → YTsaurus). Strong focus on automation, self-service operations, and reducing time-to-data.

CORE SKILLS

- **Data Platforms:** Kafka, ClickHouse, Hadoop, YTsaurus
- **SRE/DevOps:** incident response, on-call, reliability engineering, observability, capacity planning
- **Automation:** infrastructure-as-code, configuration management, CI/CD, internal tooling
- **Languages:** Go, Python, Bash (plus Java/C/Rust as needed)

EXPERIENCE

- **MTC Web Services (MWS)** Oct 2025 – Present
Senior Site Reliability Engineer Moscow, Russia
 - **Internal Managed Databases (ClickHouse):** Develop and operate internal managed database services with the primary focus on ClickHouse: reliability, scalability, and operational maturity.
 - **Support Automation:** Automate recurring L1/L2 support flows and internal user requests (runbooks, tooling, and process improvements) to reduce manual operations and speed up resolution.
- **VK (former Mail.ru Group)** Feb 2024 – Oct 2025
Lead Site Reliability Engineer Moscow, Russia
 - **kafka-rebound (Kafka Migration Service):** Designed and implemented **kafka-rebound** — a service to migrate and backfill data between Kafka clusters; adopted as a standard migration tool and used in production for **20+ Kafka clusters**.
 - **Hadoop → YTsaurus & Internal Cloud Migration:** Drove migration of multiple internal ETL services from Hadoop to YTsaurus and the internal cloud, including productionizing and moving kafka-rebound as part of the new stack.
 - **livelogloader (Real-time Log → Tables):** Built **livelogloader** to parse binary internal process logs in real time and transform them into YTsaurus tables, reducing the time-to-ready tables from **24 hours to minutes**.
- **VK (former Mail.ru Group)** Mar 2021 – Feb 2024
Senior DevOps Engineer Moscow, Russia
 - **Data Platform Operations:** Supported and evolved critical internal data infrastructure and services (observability, automation, incident response) across multiple environments.
- **Mail.ru Group** Jul 2019 – Mar 2021
DevOps Developer Moscow, Russia
 - **Authorization Management Platform:** Contributed to the design and implementation of a centralized authorization system used across 10+ internal services (DBMS, dashboards, notebooks, platform services). Tech: ClickHouse, Python (aiohttp), Kerberos, NGINX.
 - **Internal Hadoop Distribution:** Built, tested, and packaged an internal Cloudera-like Hadoop distribution based on upstream Apache artifacts (fpm packaging).
 - **Large-scale Operations:** Maintained and upgraded clusters at 400+ nodes scale; performed zero-downtime upgrades for Kafka (6 nodes, high throughput) and multiple ClickHouse clusters; improved internal metrics and log ingestion pipelines. Tech: ClickHouse, Kafka, Hadoop, PostgreSQL/MySQL, Prometheus/Graphite, GitLab.
- **Arenadata** May 2017 – Jun 2019
Software Engineer Moscow, Russia
 - **Arenadata Grid (Apache Ignite):** Led integration of a new in-memory computing product into Arenadata Enterprise Platform; performed load testing and built automated deployment.
 - **Arenadata Cluster Manager:** Implemented new services and developed Ansible automation; integrated with Graphite/Grafana-based monitoring.
 - **Arenadata Ambari:** Developed and refactored Python deployment tooling; integrated Hive LLAP; 100+ commits in internal Ambari repository.

EDUCATION

- **National University of Science and Technology MISiS** 2012 – 2016
B.Sc. Information Systems and Technologies Moscow, Russia
- **National University of Science and Technology MISiS** 2016 – 2018
M.Sc. Information Systems and Technologies Moscow, Russia

SELECTED PUBLICATIONS & OPEN SOURCE

- **redF programming language** — Implemented a small Lisp-like programming language in C (open-source).
- **"Memorable" Computing** (Russian) — Article on Arenadata Grid in Open Systems Journal (ISSN 1028-7493), Jun 2018.
